韩方媛

• 特征创造:

- 非线性变换+多项式特征:对数处理面积、价格等偏态数据,适配线性模型假设;新增面积平方项,捕捉价格与面积的非线性增长关系;
- 交互特征构建:设计房间数/面积、梯户比、每栋户数等交互项,挖掘特征协同效应;
- 类别型变量处理:对城市、楼层、供暖方式等分类变量进行独热编码;对环线、朝向、装修等级等可量化类别变量等人工设置得分;
- 空缺值填空:数值型变量使用中位数填充,类别型变量使用众数填充;

• 异常值处理:

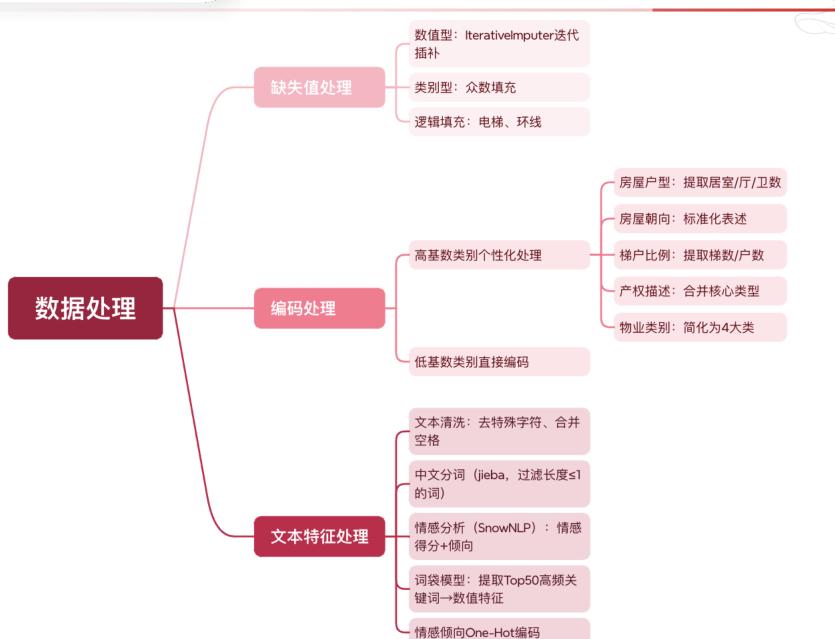

• IQR方法去除price异常值; Z-score 标准化去除数值型特征异常值;

• 数据结果

• 最终price清理后数据形状: (76408, 85), rent清理后数据形状: (71622, 93)。
